

PRINCIPAL PRODUCT LEADER / AI - DATA - FINTECH

I turn operational complexity into intelligent products.

12+ years building AI and data products inside regulated financial workflows - where trust is earned in the details and every launch must create a measurable business outcome.

12+

YEARS IN PRODUCT

\$3.3M+

ANNUAL OVERHEAD REMOVED

100K+

TRANSACTIONS / MONTH

15 -> 5

DAYS TO CLOSE

Omar BinAlshaikh

oabinalshaikh@gmail.com / [linkedin.com/in/omarbinalshaikh](https://www.linkedin.com/in/omarbinalshaikh)

The ledger, not the resume.

Products measured in cycle time, operating cost, decision quality, and scalable volume.

CASE 01

Loan Origination Reform

15 DAYS -> 5 DAYS

Redesigned the workflow end-to-end with AI-enhanced intake, automated document and income validation, and rules-based underwriting automation.

CASE 04

Data Validation Platform

B2B / AI-ML

Owned a platform combining document classification, extraction, deterministic validation, human review, and partner-facing APIs.

CASE 02

Audit Automation

\$3M ANNUAL OVERHEAD REMOVED

Replaced manual compliance review with an AI-driven automation layer that improved consistency and traceability.

CASE 03

Recording Automation

\$300K ANNUAL SAVINGS

Built an API-based workflow that eliminated manual data entry and reconciliation at operational scale.

CASE 05

B2B Integrations

PARTNER-READY

Aligned API contracts, data schemas, SLAs, and partner enablement for reliable platform integrations.

CASE 06

Cloud Migration

ON-PREM -> AWS

Led migration of core data infrastructure to improve scalability and reduce operational overhead.

Clarity before velocity.

01 Start with the problem

Keep the solution space open until the underlying business problem is understood.

02 Make the workflow visible

Map friction, decisions, failure points, and the size of the opportunity before writing code.

03 Use AI where it creates leverage

Apply models where they remove meaningful effort, improve decisions, or unlock a previously impractical capability.

04 Keep humans where judgment matters

Design explicit review paths for regulated and high-risk decisions instead of treating AI as a black box.

05 Measure outcomes

Define success as time saved, cost removed, quality improved, revenue created, or risk reduced.

CORE PRACTICE

**AI & ML Products / Data Products / 0-to-1 Development / Technical Leadership /
Process Automation / Product Strategy**

BACKGROUND

Built for complex environments.

EDUCATION

Master's - Management

Harvard University

BBA - Finance
Eastern Michigan University

CERTIFICATIONS AND TRAINING

SAFe PM/PO

Certified Scrum Product Owner

Six Sigma Green Belt

Advanced Negotiations - Harvard

Strategic Management

Organizational Behavior and Change

CONNECT

Let's build AI products that have to be right.

Open to product leadership opportunities across AI, data products, FinTech, and technical product management.
